Download and Install Oracle XE 11g

- Go to http://www.oracle.com/technetwork/database/database-technologies/express-edition/downloads/index.html to download the appropriate Oracle software based on the Operating System of your computer. Most of you should go to the first link for Windows X64. You must accept the License Agreement first.
- If you do not have an Oracle account, you will be asked to create one.
- Install the software after you have downloaded it. You will need to create a system (or DBA) account/password while installing. Use a password you can remember or write it down; you will need this password when you create a database for labs and homework.
- Also download Oracle SQL Developer and install it. You will need it too. Choose the first link if you have a 64-bit OS. After you've expended the package, copy the whole folder to the Programs Files folder on your C: drive and pin the executable (sqldeveloper) to your Taskbar and/or Start Menu.
